Earlex®

PRODUCT GUIDE

It's easy with an Earlex

Earlex® SprayStation

How does a SprayStation work?

The Earlex SprayStation® uses **H**igh **V**olume **L**ow **P**ressure (HVLP) technology. Used by professionals for decades, this technology makes it easy to set up, easy to spray and easy to clean up. A much better quality finish can be achieved by spraying than with a brush or roller and it's faster too!

Benefits of a SprayStation®

Speed - Faster than a brush or roller.

Less wastage - Less paint wastage than with a brush or roller.

High quality finish - No brush or roller marks and it's quick and easy to create a professional looking finish.

Greater versatility - Can be used outdoors and indoors with a wide variety of paints.

Detail - Great for all painting tasks - nothing too big or small, from interior walls and ceilings to fences, sheds and decking as well as staircase spindles, radiators etc.

Easy and quick to clean - Clean up is faster than a paintbrush, roller or airless gun.

How it works

Low overspray ensures higher paint transfer efficiency and means less masking is required.

What paint you can spray?

All gloss, undercoat, primer, emulsion, wood and fence treatments, lacquers and *smooth masonry paint (*not with Spraypack)

HV1900

Earlex® SprayStation

Designed as an entry-level paint spraying system

The HV1900 SprayStation® is ideal for the first time or occasional sprayer on a limited budget.
This lightweight, versatile sprayer works effectively on small to medium sized projects inside and outside the home with many thin to medium bodied materials such as deck stains or sealants. The HV1900 SprayStation® has low overspray and can be quickly and effortlessly cleaned up.
